

**“Project-oriented form of
teacher professional
development for pre-service
and in-service physics teachers”
(a.k.a. *“Professional Designing”*)**

<http://www.cognisity.how/2016/10/facilitating.html>)

I'm just
browsing

I've got a
problem to
solve

Seek:

1. a knowledge;
2. a technical instrument;
3. a collaborator

**Will we have the same
outcome after a
professional
development event?**

The teacher can take a passive position ("I am just looking for something new and interesting"). Or, the teacher can take an active position ("I have a problem and I need to find a means to solve it")

The latter position significantly increases chances that after the event the teacher will be making some changes in his or her teaching practice. And that is what we all want from a professional development event.

The outcome and effectiveness of a teacher professional development event is viewed via changes in the teaching practice made by the participant (attendee) after the event, and focusing on making advancement in the teaching practice by solving specific problems and overcoming specific obstacles.

“When I started my career, I did not have a say in the menu of courses that my district taught. We logged into a training system and chose, based on what was being provided. The problem was that *none of the provided sessions applied to what I needed*, and when district requirements were that a certain number of hours be earned through in-district training, it meant that *a large majority of teachers were taking courses just to earn the hours*. That was more than 10 years ago, and sadly, in many school districts, this is still the case.”

From a book by Rafranz Davis, “The Missing Voices in EdTech”, 2015 (CORWIN)

Various researchers have been looking for methods to ensure that after attending a professional development workshop a teacher will bring into his or her practice new knowledge presented at the workshop. One of the practices which proved to be efficient is based on the activity theory, and called "Professional Designing".

The theoretical foundation of this branch of the research can be found in publications of G.P. Shchedrovitsky (1964, 1966, 1971, 1977, 1981), and his colleagues, such as N.G. Alekseev (1992) and followers such as A.P. Zinchenko (2014).

The Moscow Methodological Circle

Moscow Methodological Circle (MMC) is the philosophical and methodological intellectual and practical school established by [Georgy Petrovich Shchedrovitsky](#) (or, GP, as many of his pupils nicknamed him)

The Circle emerged in the early 1950s and took its final shape in 1954 in the course of the discussion on the issues of logic that was held at the Philosophy Department of the Moscow State University. It was first known as the Moscow Logical Circle (MLC). The founding fathers of the MLC were [A. A. Zinoviev](#), [G. P. Shchedrovitsky](#), [B. A. Gnushin](#) and [M. K. Mamardashvili](#).

In the year of 1958, after the split-up with A. A. Zinoviev, G. P. Shchedrovitsky became the ideological and organisational leader of the Circle, and the Circle took the name of the Moscow Methodological Circle. Today GP's pupils established [independent organisations](#) proceeding with the intellectual traditions of the Circle, and the MMC took the form of a broader [Methodological Movement](#).

Shchedrovitskiy Georgiy Petrovich (1929-1994) - Russian philosopher and psychologist. Studied the problems of interrelations between Pedagogy, Logic, Sociology and Psychology. Researched intellectual activity, methods of solving mathematical problems by children, the place of play activity in children's communities. Proposed the idea of conceptual-genetic logic. In 1980s developed, in collaboration with his students and followers, participatory planning games combining the characteristics of training and business games with intellectual methodological discourse.

Activity theory

Lev Vygotsky

From Wikipedia, the free encyclopedia

Lev Semyonovich Vygotsky (*Russian:* Лев Семёнович Выготский or Выгóтский, born Лев Симхович Выгодский [Lev Simkhovich Vygodskiy], November 17 [O.S. November 5] 1896 – June 11, 1934) was a Soviet psychologist, the founder of a theory of human cultural and bio-social development commonly referred to as *cultural-historical psychology*, and leader of the *Vygotsky Circle*.

Vygotsky's main work was in developmental psychology, and he proposed a theory of the development of higher cognitive functions in children that saw reasoning as emerging through practical activity in a social environment. During the earlier period of his career he argued that the development of reasoning was mediated

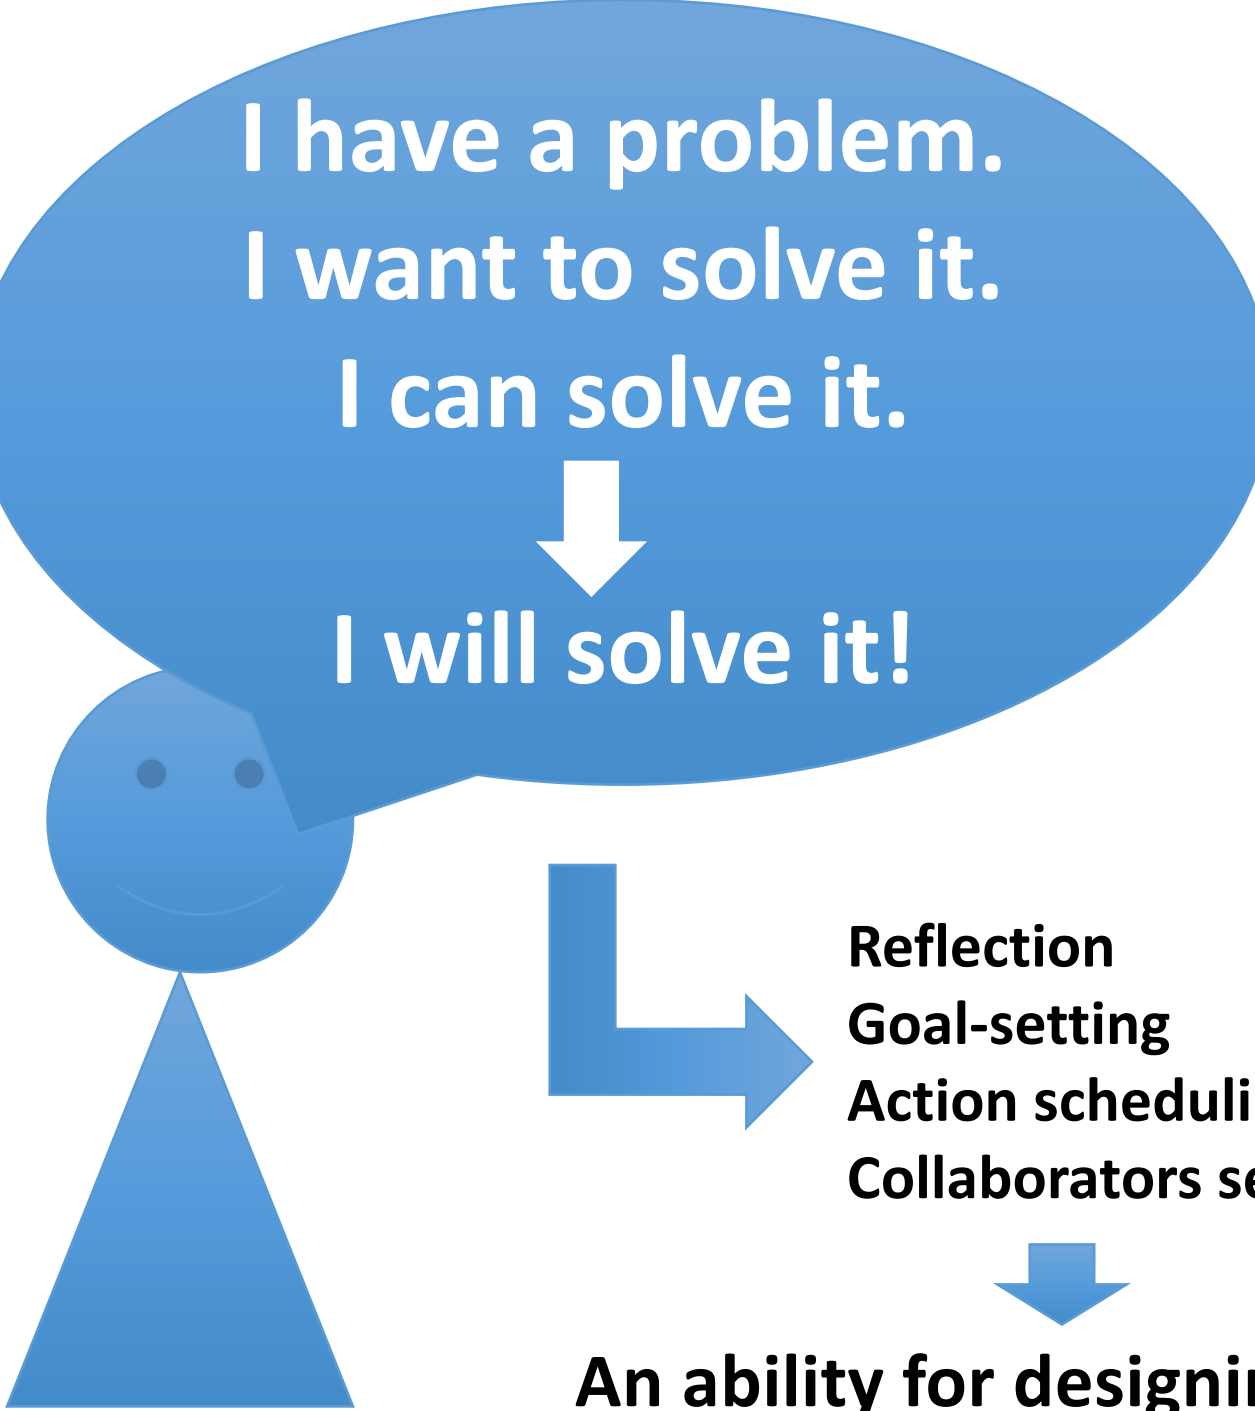

Lev Vygotsky

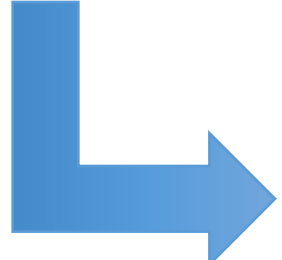

Professional Designing helps to ignite and maintain a process of transformative development of an individual or an institutional educational practice.

By a definition: Professional Designing is an intellectual activity resulting in: (a) constructing an image of the ideal/perfect professional situation (whatever it might mean for a given person), and (b) planning activities aimed at the transformation of the actual professional situation making it closer to the ideal one; the material result of a professional designing is a project. <http://www.teachology.xyz/pd.htm>

I have a problem.
I want to solve it.
I can solve it.
↓
I will solve it!

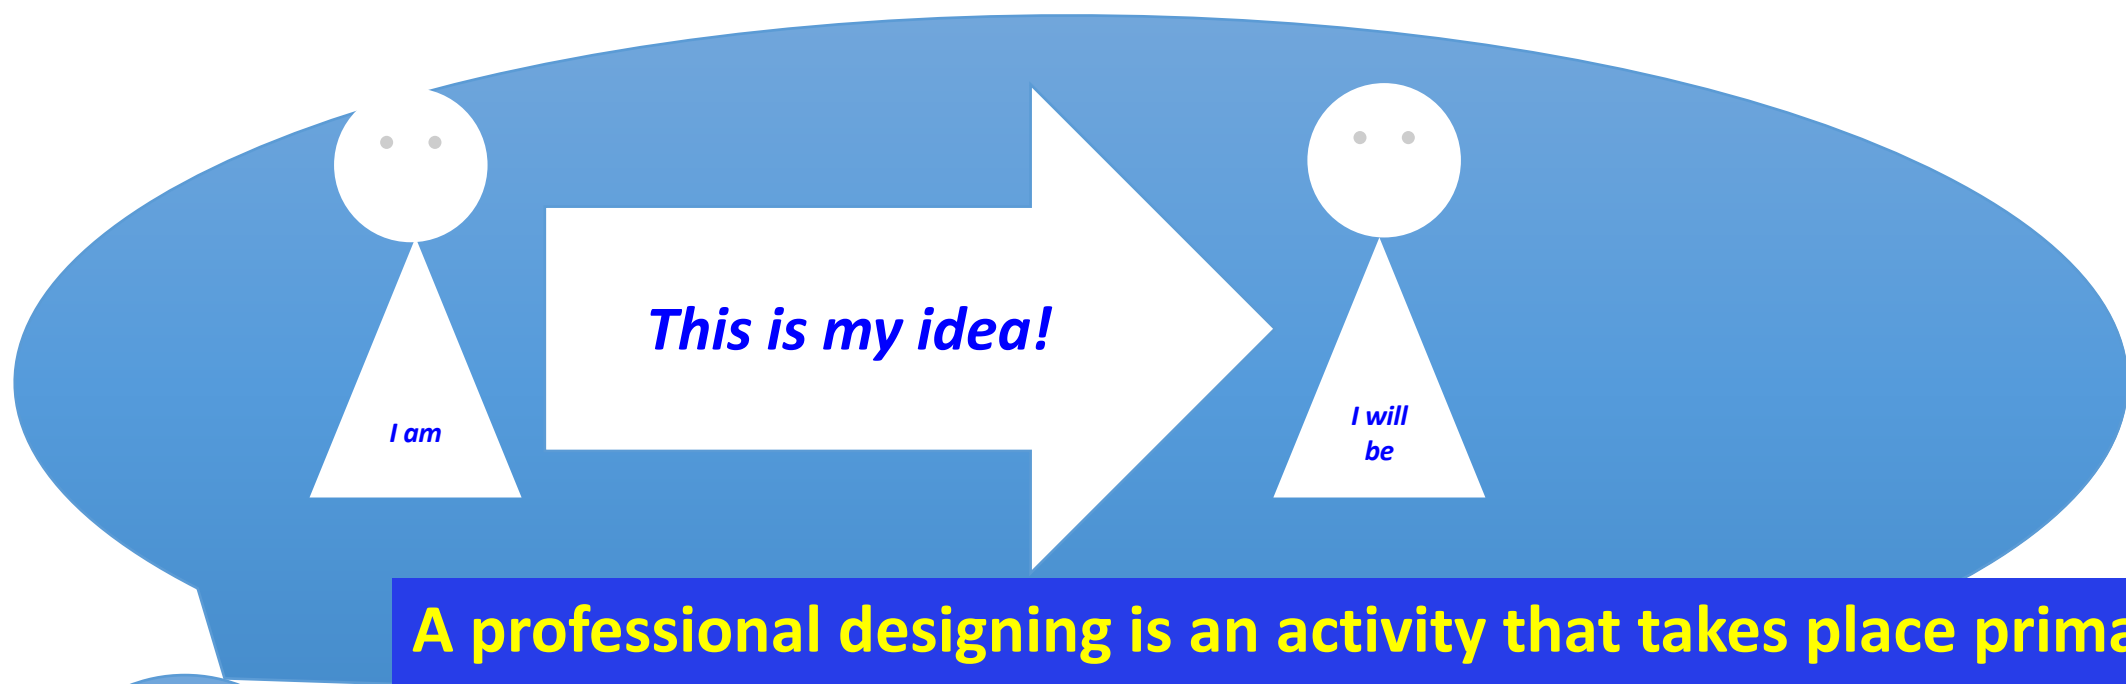

Reflection
Goal-setting
Action scheduling
Collaborators seeking

An ability for designing the own teaching practice

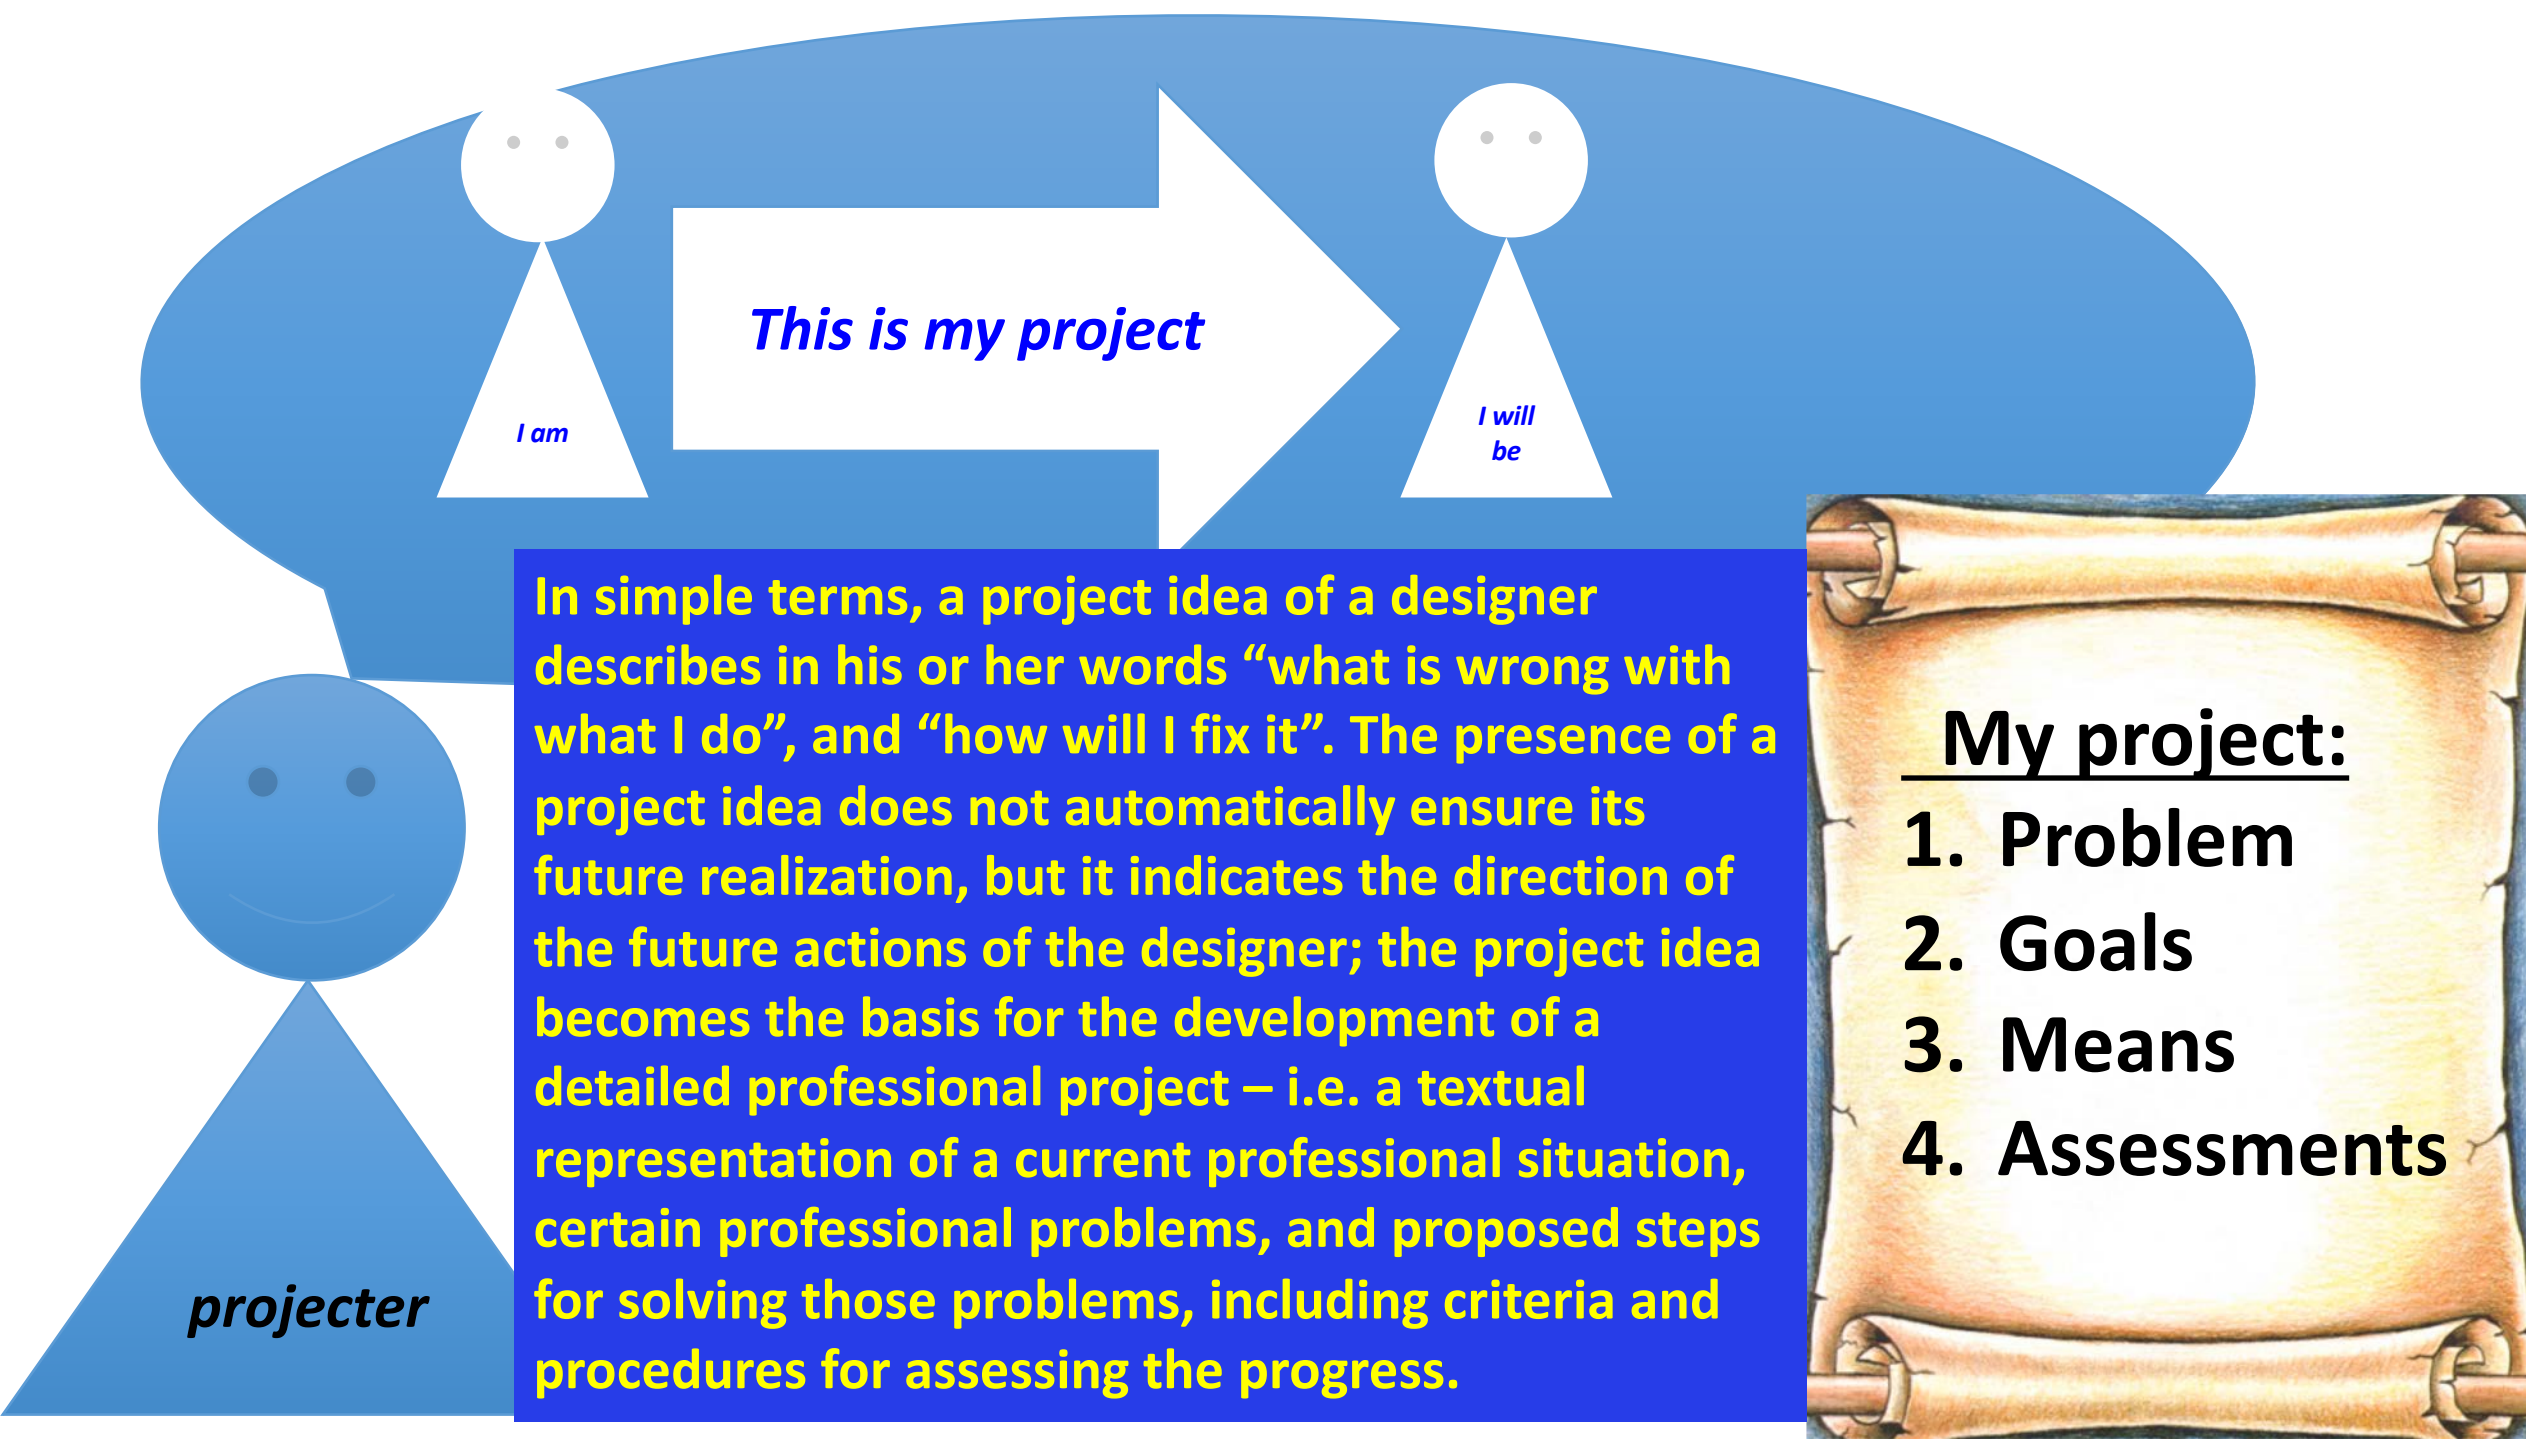

In order to transform his or her professional situation, teachers (a) must be willing to change their own practices, and (b) must be able to make the change. This means that professional skills, abilities, competencies of a teacher should include not only specific subject-related skills or teaching-related personal qualities, but also “meta-skills”, allowing to manage processes of idealization (i.e. drawing mental images), reflection, goal-setting, action scheduling, and so on, which are required for transforming a human practice. A combination of such skills forms the ability for designing the own teaching practice.

A professional designing is an activity that takes place primarily in the area of personal values and motives, goals and objectives, actions and procedures, problems and possible solutions. When conducting a professional designing, or shortly – when designing, one does not deal with real objects or subjects, but manipulate with the abstract concepts relevant to the one's professional practice (here and below a person conducting a professional designing is called a designer, or a projector).

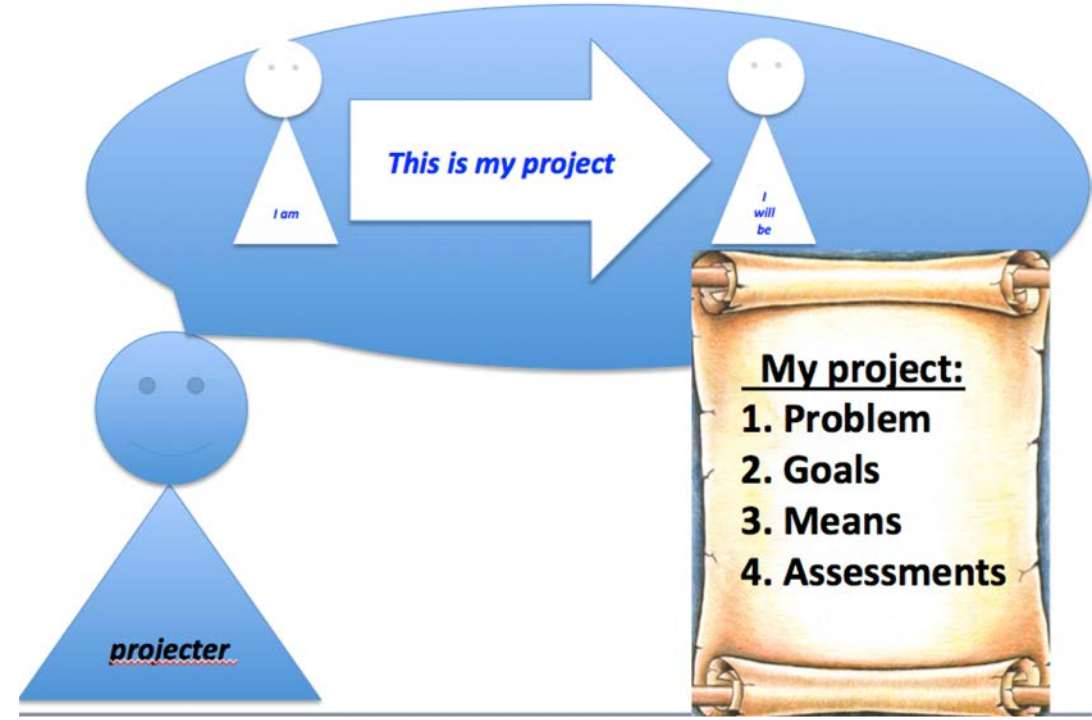

The first product of a professional designing is the formation of a project idea.

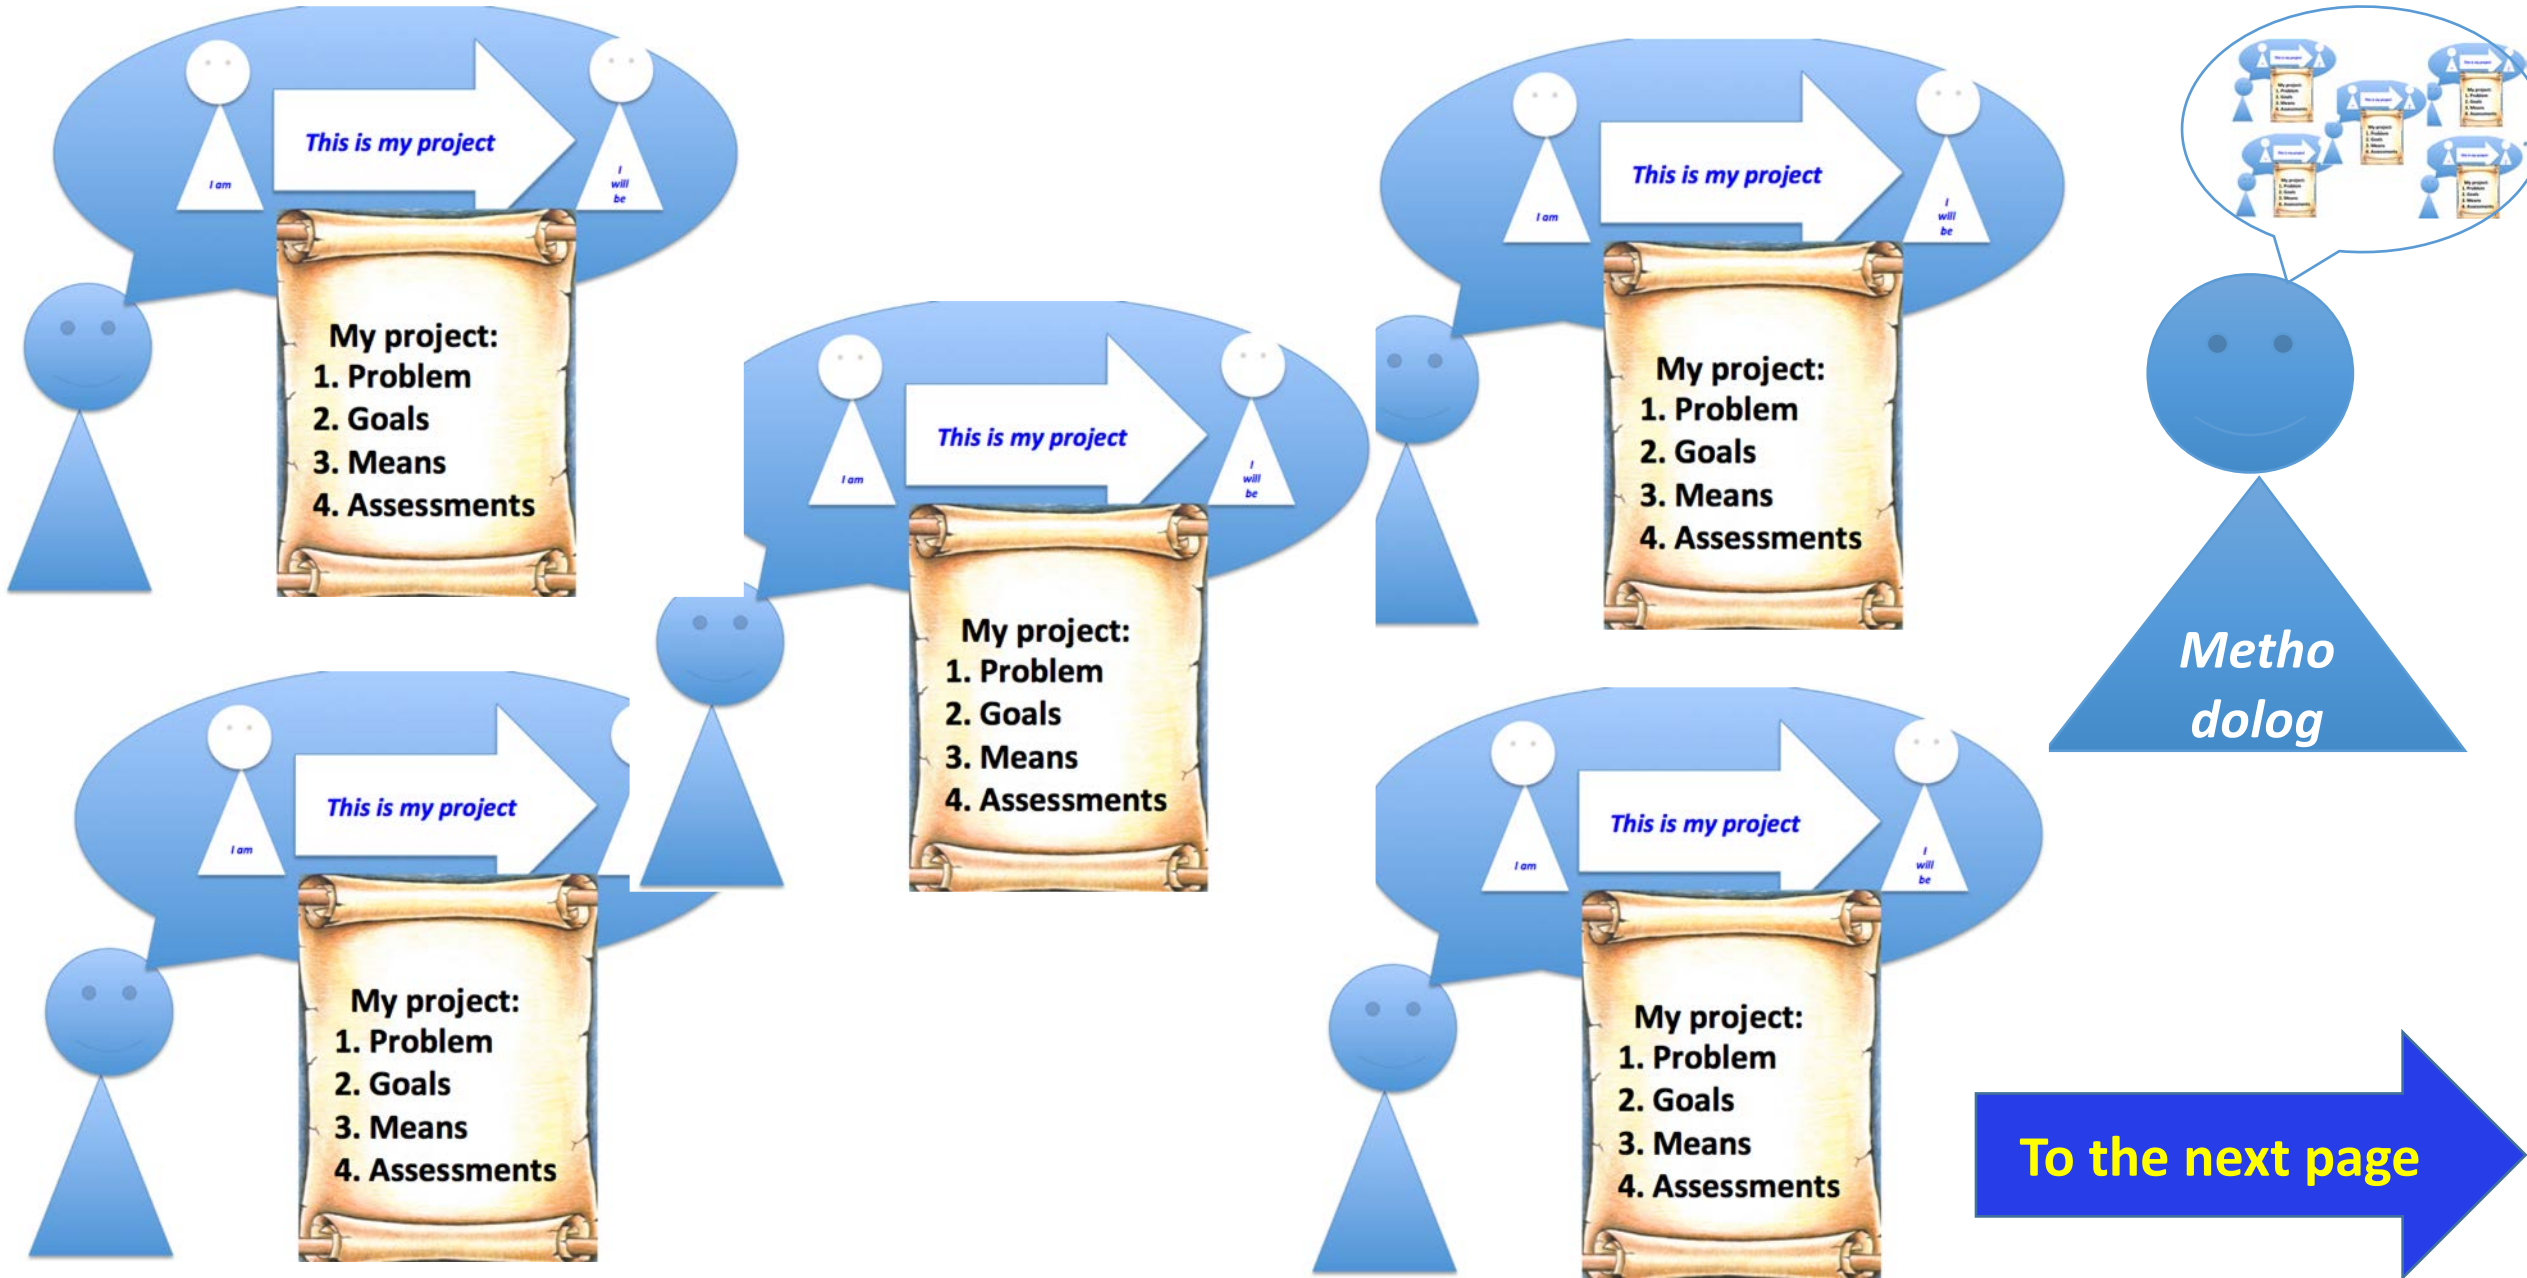

*Welcome to
our
Professional
Designing
Workshop!*

The most important product of a professional designing is a personal professional project, the existence of which significantly increases chance for a teacher implementing in the future practice knowledge presented during a workshop.

Activity-Organizing Workshop (AOW)

Activity-Organizing Workshop (AOW)

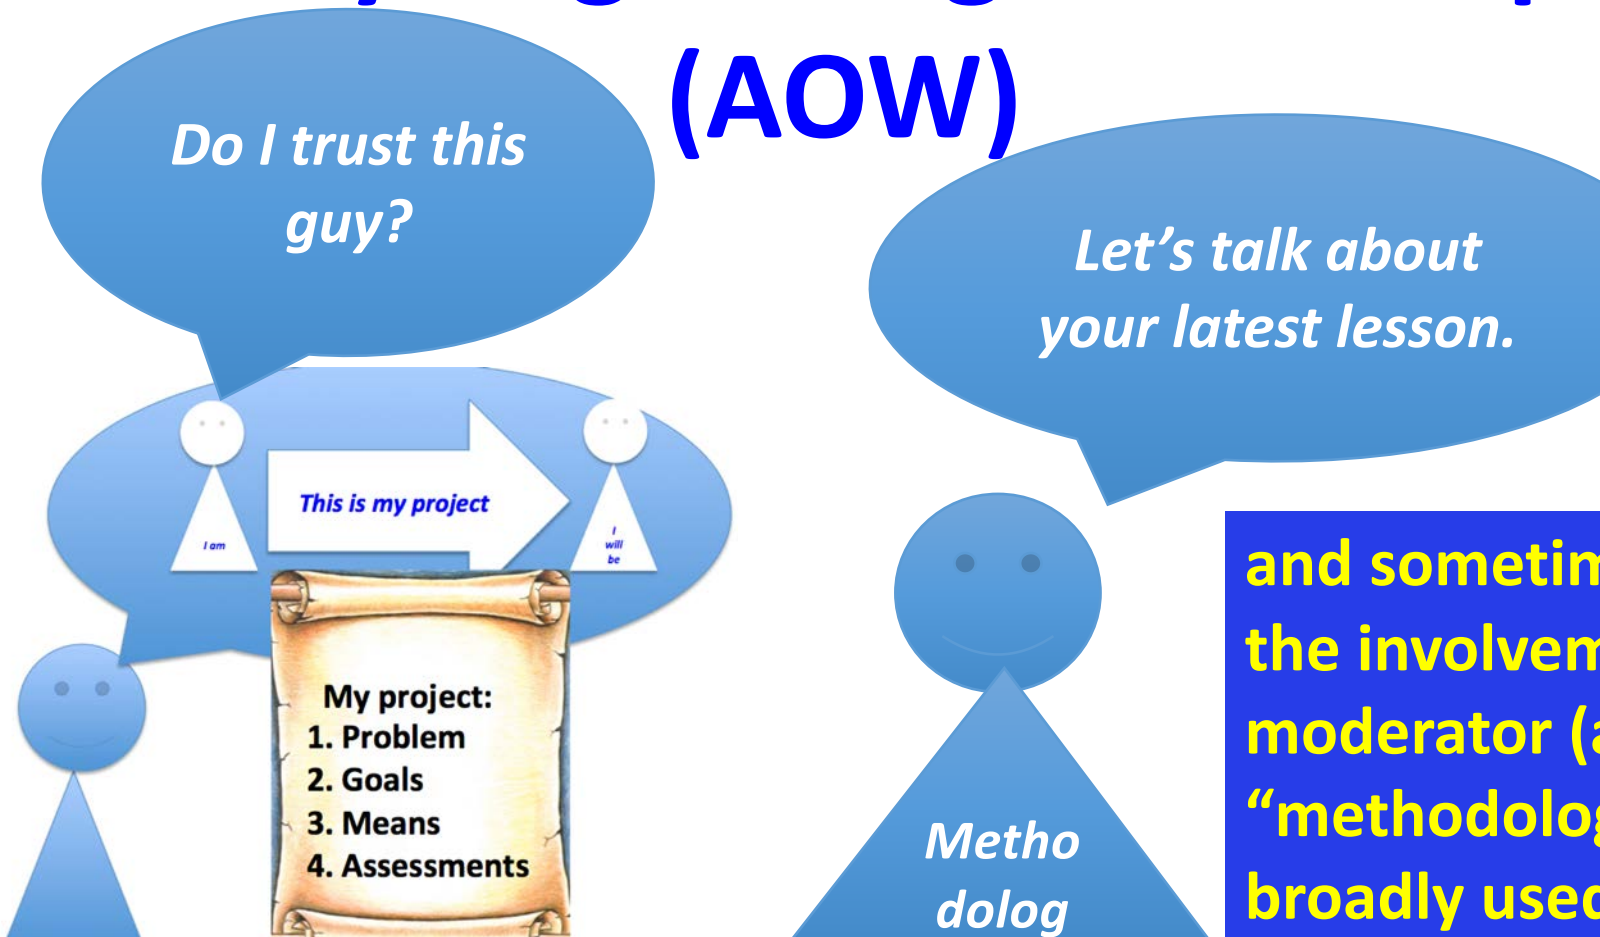

A professional designing – as a human activity – is essentially situational; its ultimate goal is to find mechanisms for self-transforming a concrete current professional situation of a projector.

A projector never works alone; there is always a set of active or potential collaborators (or competitors).

An effective form for coordinating professional goals and actions, based on the implementation of project-aimed activities, is the so-called “activity-organizing workshop”. AOW participants usually represent coworkers from an institution or an institutional entity, or represent the same district.

Activity-Organizing Workshop (AOW)

Communicating processes ignited during AOW and aimed at unveiling images, views, and opinions of participants about professional activities of themselves and others are complicated

and sometimes emotional. That demands the involvement of an experienced moderator (a.k.a. a “methodolog”, a.k.a. a “methodologist”; the former term is more broadly used in the context of AOW).

Guided by a methodolog, AOW participants become actively engaged into an individual professional designing. As the result of this work, the participants inevitably advance their ability to conduct a professional designing. The effectiveness of AOW strongly correlates with the experience of a methodolog moderating the event.

Activity-Organizing Workshop (AOW)

It is very important for the success of the whole event that participants would be willing to openly discuss their teaching experience (including such personal and usually internal matters as their values, moral limits, beliefs, life expectations, professional aptitudes, goals and actions). This conversation usually leads to an eventual realization of the existence of some

gap/disconnect/incoherence between the results and the structure of actual teaching practice and the declared teaching goals and methods. When the existence of this gap is clearly presented to a participant, the so-called “problematic situation” has been reached.

Activity-Organizing Workshop

(AOW)

I know what I am going to do when I get back to school!

This is my project

My project:

1. Problem
2. Goals
3. Means
4. Assessments

Individual interviews, surveys, reflective feedback from teachers, observations of teachers' activities during events and while teaching students before and after events.

I am glad we worked it out!

*Metho
dolog*

All precedents of AOW demonstrate that when teachers are immersed into a professional designing it positively affects their teaching practice in general and an ability to self-improve their teaching practice in particular. The conclusions on the effectiveness of the project-oriented methods of organizing teacher

professional growth were made on the basis of individual interviews, surveys, and reflective feedback from teachers, and observations of teachers' activities during events and while teaching students before and after events.

Areas of expertise:

- A) administrative practices related to running a unit of an administrative structure, such as a department, or an institution, including but not limited to:
1. strategic and tactical planning
 2. observing, guiding, coordinating, evaluating the performance of employees
 3. analyzing individual reports, preparing and presenting cumulative
 4. managing everyday workflow
- B) consulting on developing teaching practices at different levels (individual teachers, teams of teachers, schools, school districts)

Notes on Forbes Magazine "30 Under 30" Summit (Boston, 16 – 18 October, 2016)

(If you had read the introduction to this post on my campaign site:

<https://www.gofundme.com/teachology>, just scroll down to asterisks line *****)

These three days have been very insightful for me.

I am sure that later in time I will have more coherent picture of what had happened. In this update I just want to offer a brief, mostly chronological than logical, illustration of the Summit.

As you know, I am not really an entrepreneur – not yet. But I will. According to Jon Nastor (the author of "Hack the Entrepreneur") "We aren't born entrepreneurs, we become them".

When I was a student I saw myself writing papers on condensed matter physics, publishing books and giving conference talks. Nowadays I am trying to transfer to people the feeling of urgency and my view on the deepness of the issues in a science of education (which does not exists yet: <http://www.teachology.xyz/30uS.html>).

I do have an entrepreneurial gene, though. If I hadn't, I would not quit my rising career back in Russia 14 years ago, and would not move to a different country with only \$300.00 in my pocket, \$5000.00 in debt, with no professional network, and no ability to speak or understand English. And look at me know – teaching physics to college students, and publishing papers on education!

Today is a big day for me! I finally got the kids...

Today I have met a man, we talked, I said that I...

Hi everyone, yesterday I found an interesting site...

Hi Everyone! Today I have decided to start a blog...

Welcome to TeachOlogy Consulting, LLC.

I am Dr. Valenti Voroshilov.

The mission of my company, TeachOlogy Consulting (or TC), is helping individual educators and institutions of all levels with improving current teaching practices, and adopting or developing new teaching practices, answering the demands of students, teachers, parents and administrators.

The First Law of TeachOlogy:
If we take two large groups of similar students, and one group of students will have a more extensive or divers learning experience (for example, more contact hours, or more time spent on certain exercises, or training through more, or more difficult exercises) students from that group, on average, will demonstrate better learning outcomes than students in the controlled group.
